Agenda

- What is Energy Optimisation
- Tools available
- Process
- Benefits
- How the savings are achieved
- Conclusion/questions

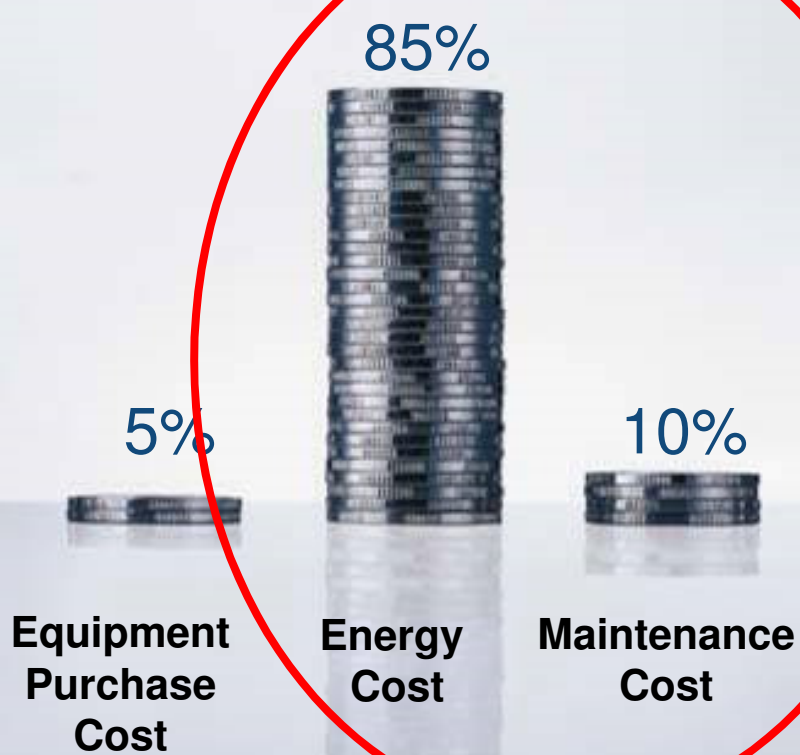

The total amount of electricity consumed by pumps adds up to far more than most people realise

*Pumps account for a massive **10%** of the world's electricity consumption – way too much is pure waste*

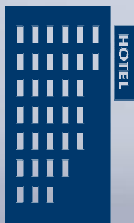

Source: International Energy Agency 2010

If you think pumps are expensive, consider the costs of running them

Average Energy Price Increase

Energy Optimisation Tools

- Energy Check - Overview of the Life Cycle Cost and potential energy savings, based on manufacturers data and experience
- Pump Audit - Facts about the efficiency and operating profile of your pump process, based on measured data from the pump
